

NOWAR Handcuffs – Bond and Pilot Chain

This compact and extreme rugged bond and pilot chain can be carried along in a trouser pocket inconspicuously and is applicable promptly and quickly in any case of need. Both ends in T-design will be laid into each other which results in a safe handle. The diameter can be adjusted to nearly each arm size only by contorting the chain. As no mechanical components are used, this chain is inured to soil or other impairments.
