

TCH Handcuffs – Model 800, 800B, 820, 820B, 820-7L, 920

The traditional handcuff equipped with chain perfectly provides the task of keeping in prison the suspected persons due to the up-to-date manufacturing technology and the top quality materials used. Through its chain fitted form the handcuff attached to a handcuff fixing belt is especially suitable for transporting very dangerous prisoners. Because of the different body sizes the handcuffs are available in the traditional Standard size and also in Superior size which is 15% bigger in wrist perimeter. The independent three-lined security locking system ensures the handcuff's operational safety. Due to its ergonomical shape the handcuff does not cause permanent injuries in the guarded person's wrist.
