

TCH Handcuffs – Model 810, 810B, 830, 830B, 930

The five hinged handcuffs guarantee maximum security of the guarded person due to the TCH company's continuous product development, up-to-date technology and the top quality materials used. Because of the different body sizes the handcuffs are available in the traditional Standard size and also in Superior size which is 15% bigger in wrist perimeter. The handcuff can only be removed with the key belonging to it that opens the independent three-lined lock mechanism. Due to its ergonomical shape the handcuff does not cause permanent injuries in the guarded person's wrist.
