

NOWAR® Transport Belt for Prisoners, Leather

The NOWAR® Transport Belt for Prisoners is used principally by jails for the marching off prisoners. In connection with conventional handcuffs with chains it is possible to fix the arms of the prisoner in front of his waist. Owing to this the prisoner has only a limited mobility and is not able to lash about. The Transport Belt for Prisoners is also available with a fixing for the arms in order that the mobility of the prisoner is limited anymore (see drawing of the article no. 0854002).

The NOWAR® Transport Belt for Prisoners is made of black leather with doubled inlay of steel wire. This steel wire inlay avoids the cutting through of the belt. The belt offers an individual adjustment of sizes. It features as a special due to the quick and easy fastening.
