

## NOWAR Baton – Model RMS (Rescue Multi-Purpose Baton)

The Tonfa is one of the most important weapons of German Police and will be used for protection of Police officials during arresting criminals or as means to direct enforcement by patrolmen as also by officials of riot police. Additionally, it also performs other tasks, such as using as lever tool for opening of uptighted vehicle doors after an accident or quick battering a window to rescue a person.

The RMS is developed by us and established for years. It is shock absorbing through a special form and can be ordered with knife screwed in as optional equipment. This rescue knife can be used as belt cutter or as cutter of plastic cuffs without injuring the person owing to its special form.

<b>Material</b>	- Plastic XENYOY
