

## NOWAR Disposable Handcuffs

Disposable handcuffs are manufactured of one piece. Easy explained it is a plastic tire with a grating and a head with an opening to adopt the stripe. In the head there is a raster element which catches in the grating of the band and so close the band. This is only possible in one direction. The opening is only possible with the help of a cutter respectively at Key-Cuff it is only possible with a key for handcuffs.

Disposable handcuffs are manufactured of polyamid. Polyamid is a hygroscopic plastic. That means that the material is able to absorb and to deliver water. The mechanical characteristics are applicable swayed by the water content. So the right bearing is important. By a climate of 23°C and a relative humidity of 50% polyamid has the ideal repletion with water of approximately 2,5% achieved.
